

The **Supplementary Rubber Base** in thermoplastic rubber (TPE) is applied under the base of the pedestals and its function is to protect the waterproofing membrane from the supports of the raised flooring. It also decreases the acoustic impact created between the floor and the laying surface, creating a conduction barrier for impact sound. The bottom side of the base shows cutting lines if needed, and the raised edge allows an easy evacuation of rainwater.

## Specifications

## SPECIFICATIONS

Material	Rubber
Diameter	8.46"
Thickness	Min. 0.08"
Compatible	All Eterno Supports
